Certified pick-up | Antwerp

Dear Customers,

The physical and digital security in the port logistics chain is under pressure as current security standards are no longer adequate.

The Secure Chain is a new and more secure release procedure for import containers. Its introduction on 15.01.2024 in Belgium ensures that only known and authorized parties can participate in the logistics chain. It will also help to increase the security of port-related distribution processes in Antwerp. This means that all parties involved in the process of releasing import containers will have to adapt their working methods.

To pick-up containers in the seaport of Antwerp, you must choose one of two options from 15.01.2024:

1) Certified pick-up via NxtPort from Port Antwerp-Zeebrugge, you must follow these 4 steps to registration

- Step 1: Register your company with Port of Antwerp-Bruges
- Step 2: Sign up at NxtPort
- Step 3: Create a Cinvio account
- Step 4: Log in to Certified pick-up

2) Certified pick-up SCR (T-Mining), only for MSC, Hapag and CMA CGM

For technical questions we would like to refer you to SCR and T-Mining. There you will find links to informative pages and how to carry out the transfer.
