

Vacancy Process Engineer (Full time)

Optimodal Nederland B.V., based in Hoogvliet is an intermodal rail freight forwarder/operator and agent with frequent train connections between Rotterdam, Moerdijk and Antwerp and various destinations in the European hinterland. Since 1992 the company has been actively developing high-quality and frequent shuttle connections for both maritime and continental intermodal transport.

We aim to have more control over our rail products to further improve the quality of our services, so we are expanding our rail process management department. For the expansion we are looking for suitable candidates who meet the following qualifications:

Your tasks

- Responsibility for the further development of the Container Management System in close cooperation with the service provider
- Development of various EDI interfaces to customers and service providers
- Optimisation of the Container Management System for operational and administrative process improvement
- Drafting of procedural instructions for the staff
- Further development of BI reports & dashboards

What to bring

- Work experience in the container industry/sea freight sector
- Independent working style
- Very good analytical skills
- Experience with BI reporting is an advantage
- Process-oriented and result-oriented way of thinking
- Ability to work in a team, reliability
- Good computer skills (basic knowledge of databases is an advantage)
- Very good knowledge of Dutch and good knowledge of English. German is an advantage
- Knowledge of and experience with MS Office, Transport Management Systems

What we offer

- Working within a dynamic company and team
- Competitive salary (depending on age and experience)
- Potential for flexible working
